Krimso di pers joining forces to do cool stuff with Drupal. Whether that means w atch, training your staff to become Drupal ninjas, or advising you on your latest web project: we're all yours.

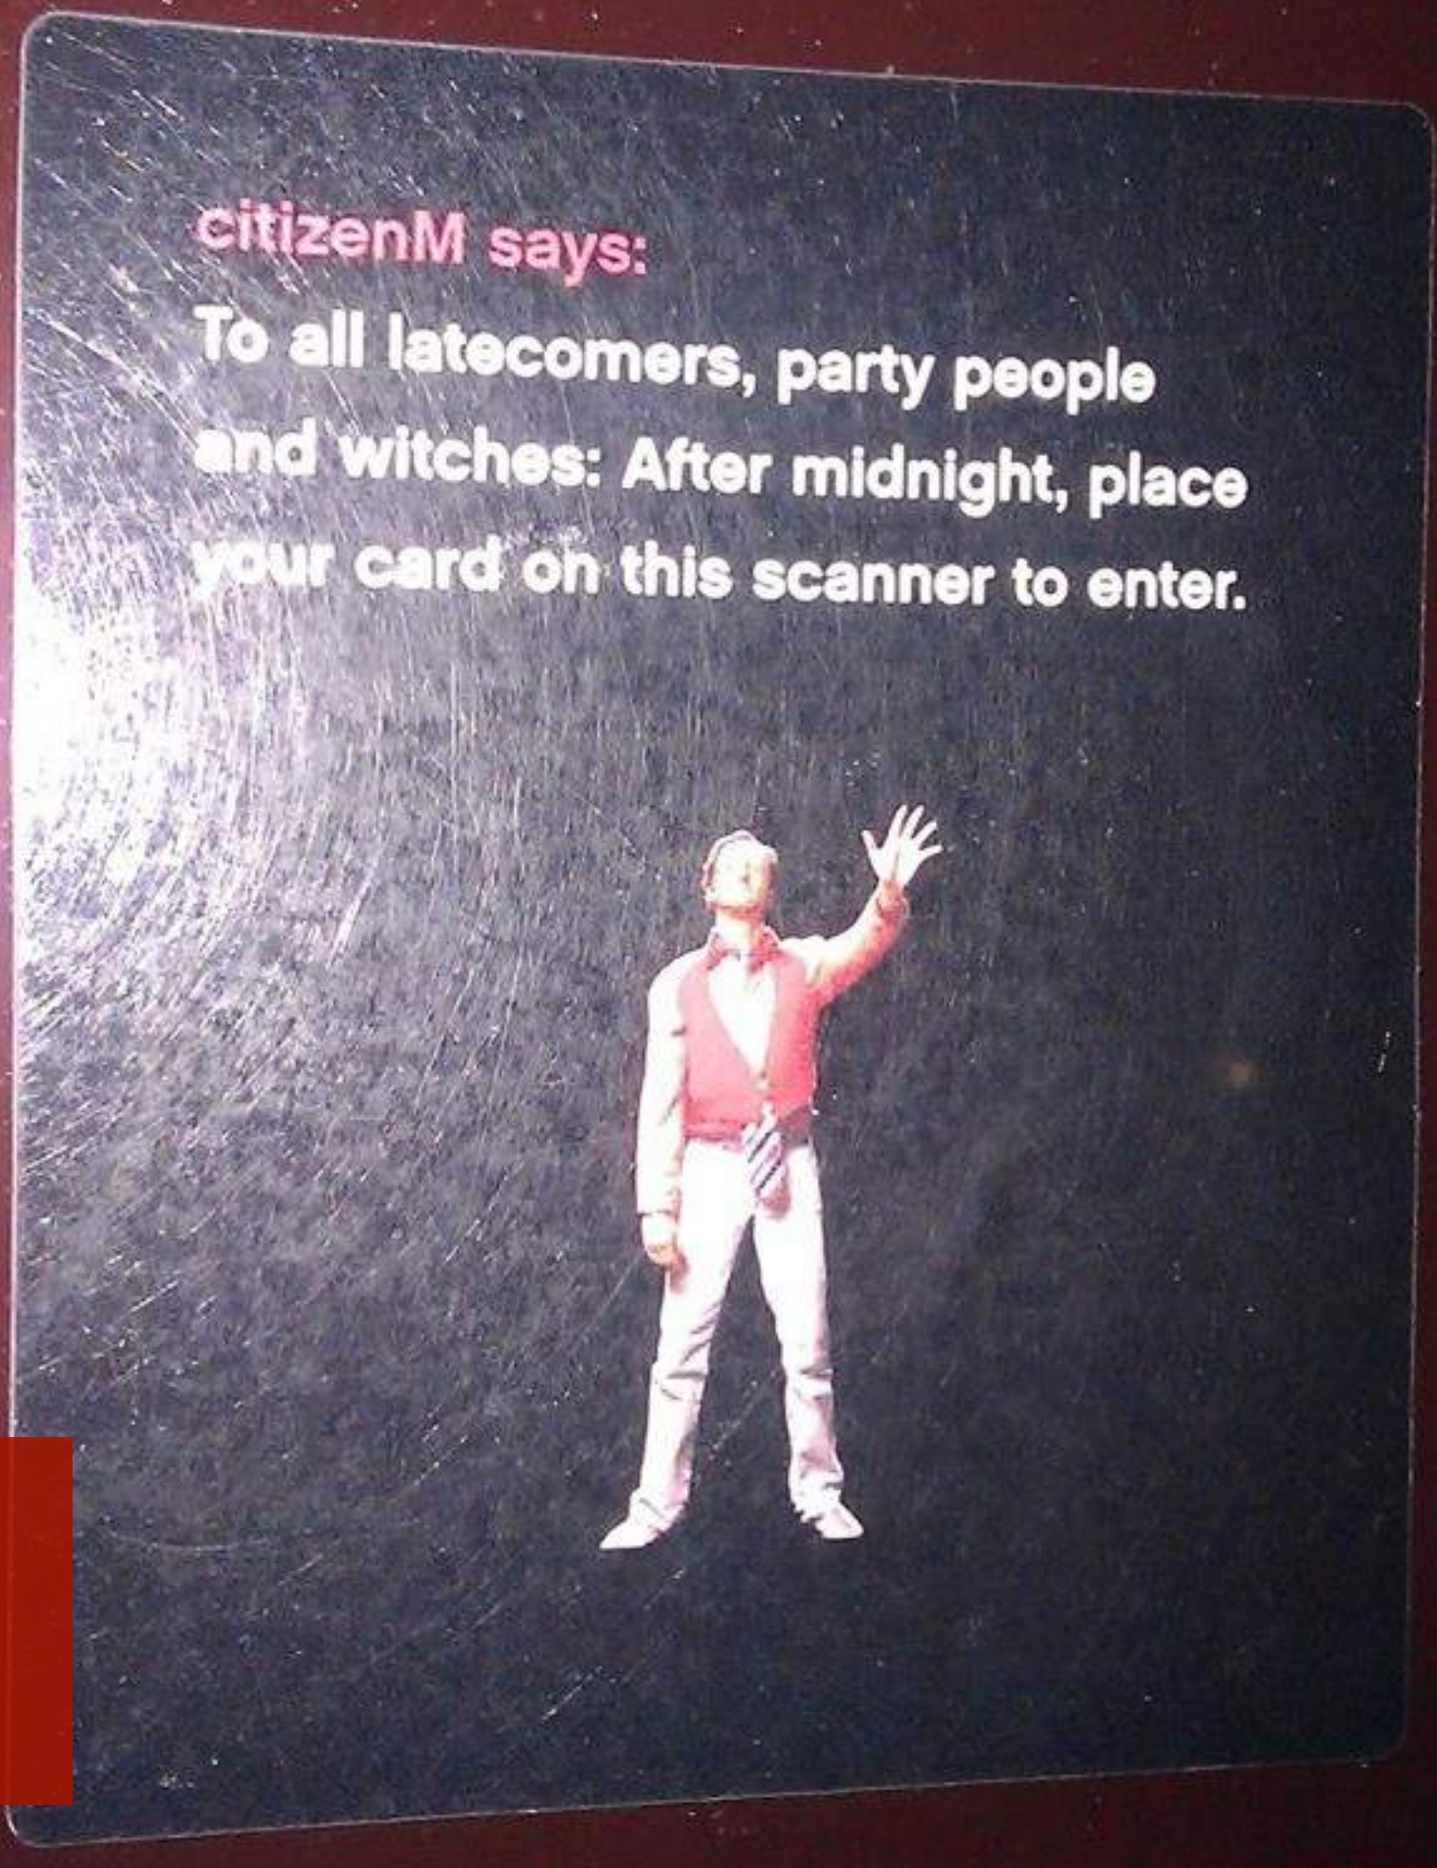

Our Krew of fifteen, coming from very different backgrounds, can take on the different aspects of web development with solid experience. From helping you define your site's architecture to implementing the design you love so much, from developing the custom module that suits your needs to importing your existing content into a fresh Drupal site.

'Cause one background we all share: we all love this thing called Drupal. We stumbled upon this stunning piece of open source software for different reasons and at different times and we like it for reasons equally different. Be it the quality and reliability of the code, or the flexibility and ease-of-use that runs through the system's veins. Each one of us is a Drupalite at heart.

Drupal 7 Usability Study at Google

What does it feel like to be a new Drupal user?

A new user feels...

confused and **overwhelmed** by Drupal's presentation of features/options.

alienated by unexplained terminology throughout Drupal.

helpless because of a perceived lack of support.

in the dark about the extent of Drupal's capabilities.

uncertain about his/her progress while performing tasks.

stupid because they assume they are using Drupal "incorrectly."

To err is human

"A common mistake that people make when trying to design something completely **foolproof** is to underestimate the **ingenuity** of complete fools."

THE REALITY...

Look around feverishly for anything that

a) is interesting, or vaguely resembles what you're looking for, and

b) is clickable.

As soon as you find a halfway-decent match, click.

If it doesn't pan out, click the Back button and try again.

How we ***really*** use the web

Poor usability results in

- Anger and frustration
- Decreased productivity in the workplace
- Higher error rates
- Physical and emotional injury
- Equipment damage
- Loss of customer loyalty
- Costs money

"It's the 'finishing the back of the drawer. You can argue that people will never see it and it's very hard to describe why it's important but **it just seems important**.

It's a way that you **demonstrate that you care for the people** that you are making these products for. I think we see ourselves as having a civic responsibility to do that. **It's important. It's right.** It's very hard to explain why."
